Proposal

- **Proposed Grade:** A
 - **Baseline B Requirements:** Met (attendance, late/missed/ignored assignments: zero)
-

Agenda

- Opening & Claim 2 mins
 - ILP Goals Walkthrough 5 mins
 - Work In Progress 3 mins
 - Discussion & Negotiation ~
 - Next Steps 2 mins
-

Individualized Learning Plan Goals

Goal 1: Consistent effort to improve reading & writing skills

- L^AT_EX for CSCI 401 deliverables → jargon problem surfaced with non-technical client → big words ≠ better writing
- Independent reading: *How to Lie with Statistics* by Darrell Huff and *The Anxious Generation* by Jonathan Haidt (in progress)
- Tried replacing short-form social media news (e.g. Instagram reels, YouTube shorts) with WSJ, LA Times, NYT

Goal 2: Regularly revising work based on feedback

- Micro-iterative revision because small focused passes rather than one overwhelming sweep was a lot more effective
- Continued revising Technical Description after final submission

Goal 3: Actively exploring new ways to build skills & better habits

- AI coding tools (Cursor, Claude Code) which shifted from writing code to directing code
- Pralumex website redesign: v0 old → v1 generic → v2 beta
- Time management experiments like Timeboxing (too rigid) and Pomodoro (attention span challenge) {utilized Todoist which made things a lot easier}

Goal 4: Strong engagement in class & commitment to growth

- Pushed myself to speak up in WRIT 340, BUAD 497, and CSCI 401
- Volunteered as one of the primary communicators for CSCI 401 capstone client
- Built deliberate habit which consisted of pausing → identifying main points → speaking clearly

Goal 5: Staying up to date with current events & technologies (*added goal*)

- Technology content like Fireship and others for software/industry awareness
 - NTSB reports and Pilot Debrief for aviation hobby + technical reading practice
-

Work In Progress

- Amazon low-level design document self-review 30+ page internship design doc which had some problems that WRIT 340 taught me to spot (e.g. jargon overload, dense structure, not objective). Proposing to annotate or rewrite.
 - Completing in-progress proposal sections (time management documentation, tech content reflection)
 - Continuing to close the speaking-up gap and real-time articulation still has room to improve (stuttering and rambling on)
-

Questions for the Professor

- Where do you see the evidence as strongest? Where is it the weakest?
 - Is there extra labor you would want me to complete to fully justify the A?
 - Would the Amazon LLD annotation/rewrite count as something meaningful?
-
